1 About this manual

This manual is intended for Kvaser Leaf v3 CB users. This document contains a description of the hardware's properties and general instructions for connecting the device to a computer.

2 Introduction

This section will describe the functions and features of the Kvaser Leaf v3 CB.

2.1 Welcome to Kvaser Leaf v3 CB

Figure 1: Kvaser Leaf v3 CB

Kvaser Leaf v3 CB is a reliable low cost product. With a timestamp precision of 50 microseconds it handles transmission and reception of standard and extended CAN messages on the bus. It is compatible with applications that use Kvaser's CANlib.

This guide applies to Kvaser Leaf v3 CB devices using at least firmware and driver versions listed in Table 1. For minimum compatible firmware and driver versions of Kvaser Leaf v3 CB see Table 7 on Page 10.

Device	Product Number	Firmware	Driver (Windows/Linux)
Kvaser Leaf v3 CB	73-30130-01532-6	v3.32	v5.45 (kcany/mhydra)

Table 1: Firmware and driver versions needed to support all functionality present in this guide.

2.3 Additional software and documentation

The Kvaser CANlib SDK includes everything you need in order to develop software applications interacting with Kvaser CAN and LIN hardware. The SDK contains full documentation and many sample programs, written in C, C++, C#, Delphi, Python and Visual Basic. Kvaser CAN and LIN hardware is built around the same common software API. Applications developed using one device type will run without modification on other device types.

The latest versions of documentation, software and drivers can be downloaded for free at www.kvaser.com/download.

3 Kvaser Leaf v3 CB hardware

In this section you can read more about the CAN channels, power supply and LED indicators.

3.1 Hardware installation

For the Kvaser Leaf v3 CB to communicate with the host computer, a compatible version of the Kvaser driver and firmware must be installed.

The driver is installed by running the file `kvaser_drivers_setup.exe`. For instructions on how to update the firmware, see Section 3.7, Updating the firmware, on Page 10. The latest version of the driver and firmware can be downloaded from www.kvaser.com/download.

The firmware is downloaded and installed directly on the Kvaser Leaf v3 CB and the driver is installed on the host computer. After the driver has been installed on the host computer, the firmware may then be downloaded and installed on the Kvaser Leaf v3 CB.

3.2 USB connection

The Kvaser Leaf v3 CB has a 6-way connector for connecting USB which has the pinout described in Table 2. The connector is mated with a Molex 51021 PicoBlade™ (e.g. housing 51021-0600 and terminal 50079-8000). There are also holes for soldering wires directly or use a 5-pin 2.54mm pitch straight pin header or board stacker like e.g. Würth 61300511121 or 61303211221.

3.3 CAN connection

The Kvaser Leaf v3 CB has one CAN channel via a 6-way connector which has the pinout described in Table 4. The connector is mated with a Molex 51021 PicoBlade™ (e.g. housing 51021-0600 and terminal 50079-8000). There are also holes for soldering wires directly or use a 4-pin 2.54mm pitch straight pin header or board stacker like e.g. Würth 61300411121 or 61303211221.

3.4 CAN bus termination

Every CAN bus must be terminated with a 120 Ohm resistor at each end of the bus. The Kvaser Leaf v3 CB does not contain any CAN bus termination, because its inclusion could cause severe disturbance in a system which is already correctly terminated.

For laboratory or testing use, the exact value of the termination resistors is not always critical. Sometimes a single terminator is sufficient. For production, proper termination is essential. If you see error frames on the bus, you should check the termination.

To save yourself a lot of trouble, always terminate the CAN bus properly.

3.5 Power supply

The Kvaser Leaf v3 CB is powered via the USB connector.

3.6 Layout

The Kvaser Leaf v3 CB has four mounting holes and two LEDs, one green for power to the left (LED1) and one yellow for CAN to the right (LED2), as shown in Figure 4. The LEDs' functions are shown in Table 6 on Page 10.

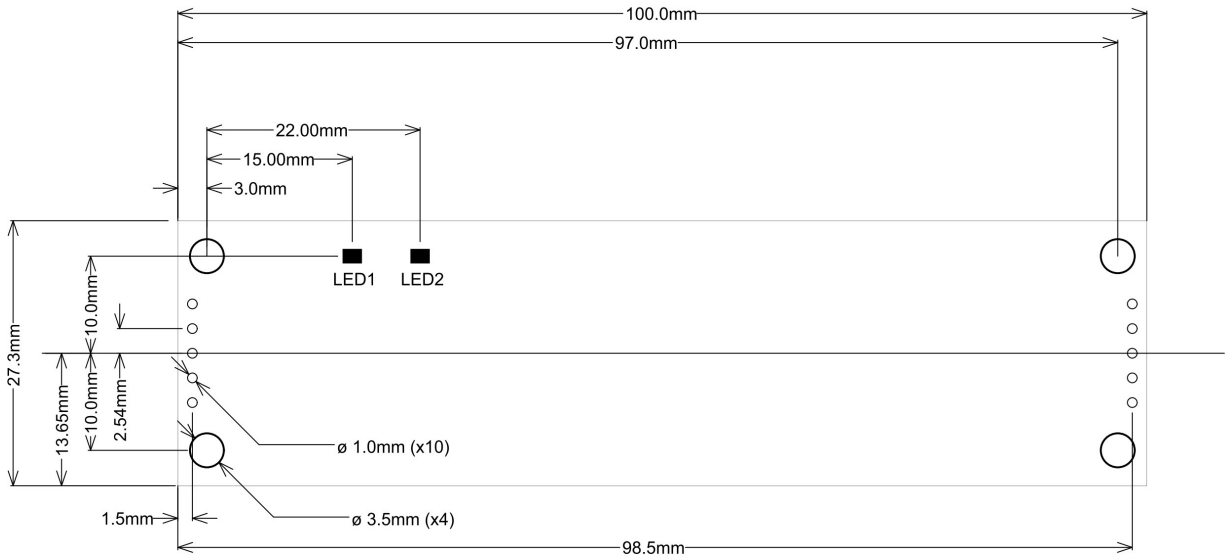

Figure 4: LEDs and mounting holes on the Kvaser Leaf v3 CB.

LED	Function	Description
PWR (Green)	Power	Steady light when unit is powered and working.
	USB configuration	Blinking once every three seconds when something is wrong with the USB connection.
	Firmware	2 Hz flash if something is wrong with the firmware or configuration.
CAN (Yellow)	CAN RxTx	Status for CAN channel.

Table 6: LEDs on the Kvaser Leaf v3 CB.

3.7 Updating the firmware

For the Kvaser Leaf v3 CB to communicate with the host computer, compatible versions of the Kvaser CANlib (including driver) and firmware must be installed.

The latest versions of firmware and drivers can be downloaded for free at www.kvaser.com/download.

Connect the Kvaser Leaf v3 CB to your host computer with the USB cable and start the update.exe application. A window opens showing the Firmware Update Instructions; read and follow those carefully.

To check the current firmware version, open "Kvaser Device Guide" which can be found in the Control Panel. Select "Kvaser Leaf v3 CB" in the tree view to the left, and click on the channel. The firmware revision information now appears in the right half of the window.

The absolute minimum firmware and driver versions needed in order to use Kvaser Leaf v3 CB are listed in Table 7.

Device	Min. Firmware Version	Min. Driver Version
Kvaser Leaf v3 CB	v3.32	v5.45
