1   About this manual

This manual is intended for Kvaser PCIEcan 4xHS users. This document contains a description of the hardware's properties and general instructions for connecting the device to a computer.

2 Introduction

This section will describe the functions and features of the Kvaser PCIEcan 4xHS.

2.1 Welcome to Kvaser PCIEcan 4xHS
Figure 1: Kvaser PCIEcan 4xHS

Kvaser PCIEcan 4xHS is a small, yet advanced, CAN multi channel real time CAN interface that handles transmission and reception of standard and extended CAN messages on the bus with a high time stamp precision. It is compatible with applications that use Kvaser's CANlib.

This guide applies to Kvaser PCIEcan 4xHS devices listed in Table 1.

Device	Product Number (EAN)
Kvaser PCIEcan 4xHS	73-30130-00683-6

2.3   Interface

Kvaser PCIEcan 4xHS provides a CAN bus interface through a standard PCI Express x1 interface.

2.4   Additional software and documentation

The Kvaser CANlib SDK includes everything you need in order to develop software applications interacting with Kvaser CAN hardware. The SDK contains full documentation and many sample programs, written in C, C++, C#, Delphi, Python and Visual Basic. Kvaser CAN hardware is built around the same common software API. Applications developed using one device type will run without modification on other device types.

The latest versions of documentation, software and drivers can be downloaded for free at www.kvaser.com/download.

3 Kvaser PCIEcan 4xHS hardware

In this section you can read more about the CAN channels, power supply and LED indicators.

3.1 Hardware installation

The Kvaser PCIEcan 4xHS may be inserted in any free PCI Express slot on the host computer. You do need to switch the power off before inserting or removing the device.

3.2 CAN channels

The Kvaser PCIEcan 4xHS has four CAN Hi-Speed channels in a single 26-pin HD D-SUB CAN connector (see Figure 2). See Section 4.2, CAN connectors, on Page 9 for pinout information.

3.3 Power supply

The Kvaser PCIEcan 4xHS is powered from the PCI Express connector.

3.4 LED Indicators

The Kvaser PCIEcan 4xHS has four yellow LED indicators, one for each channel, that indicates with a short flash that a CAN message was received or sent. A single flash may be hard to see and a continuous set of flashes will be indistinguishable from a steady light.

3.5 Troubleshooting

Use "Kvaser Device Guide" in the Control Panel to verify that the computer can communicate with the Kvaser PCIEcan 4xHS. If the firmware version shown is all zeros, there are communication problems.

4.3 CAN bus termination

Every CAN bus must be terminated with a 120 Ohm resistor at each end of the bus. The Kvaser PCIEcan 4xHS does not contain any CAN bus termination, because their inclusion could cause severe disturbance in a system which is already correctly terminated.

For laboratory or testing use, the exact value of the termination resistors is not always critical. Sometimes a single terminator is sufficient. For production, proper termination is essential. If you see error frames on the bus, you should check the termination.

⚠️ **To save yourself a lot of trouble, always terminate the CAN bus properly.**

4.4 Updating the firmware

For the Kvaser PCIEcan 4xHS to communicate with the host computer, compatible versions of the Kvaser CANlib (including driver) and firmware must be installed.

The latest versions of firmware and drivers can be downloaded for free at www.kvaser.com/download.

Connect the Kvaser PCIEcan 4xHS to your PC with the USB cable and start the update.exe application. A window opens showing the Firmware Update Instructions, read and follow those carefully.

To check the current firmware version, open "Kvaser Device Guide" which can be found in the Control Panel. Select "Kvaser PCIEcan 4xHS" in the tree view to the left, and click on the channel. The firmware revision information now appears in the right half of the window.
